

Guéridon

Jean Prouvé, 1949/1950

vitra.

Guéridon

The wooden table Guéridon, which was produced by the designer and engineer Jean Prouvé for the University of Paris, is a convincing demonstration of clear structural principles. It is a variation of Prouvé's architecturally informed design vocabulary in a natural material, proving that modern tables do not have to be made out of steel and glass.

Materials

- **Table top:** Solid wood, oiled; natural oak, smoked oak or American walnut.
- **Base:** to match the tabletop made of solid wood, oiled in natural oak, smoked oak or American walnut. Tubular steel strut, deep black powder-coated (smooth).
